

Neurovirtual EEG

Neurovirtual is the best solution for your Neurology Department, no matter what your needs are—Mobile Routine EEG or Full Long-Term Monitoring.

Easy to Use

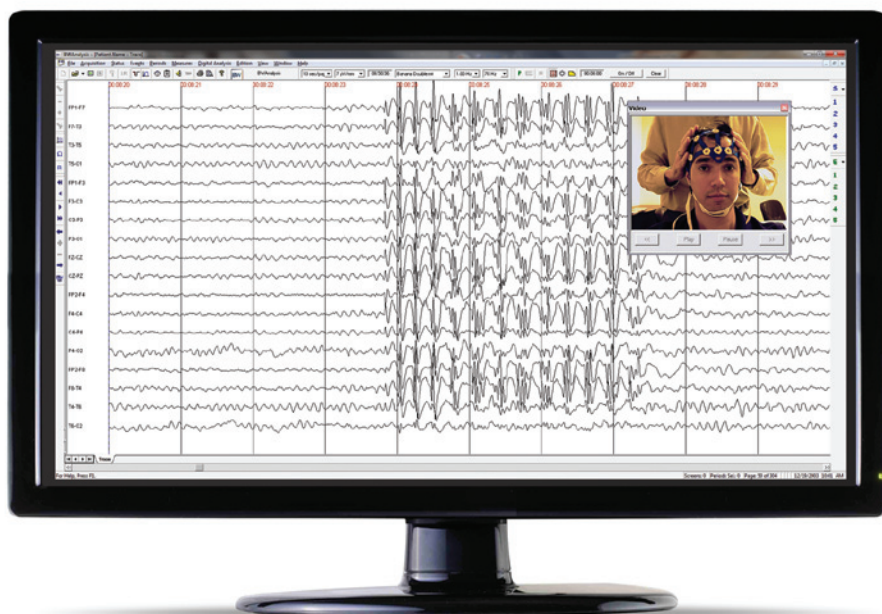

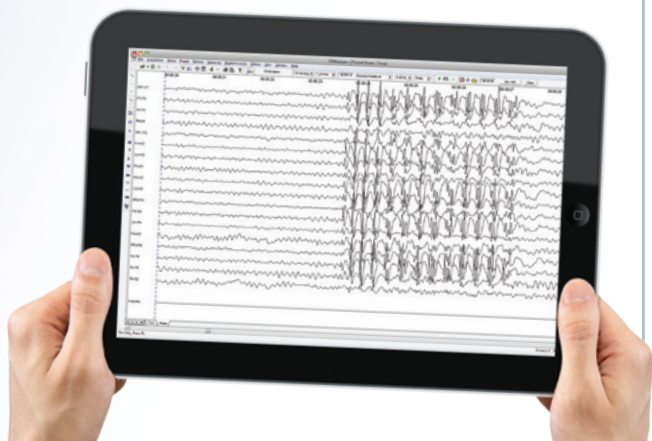

The Neurovirtual BWAnalysis is the most user friendly and intuitive EEG software on the market. Everything from setting up to performing an exam to reading EEG studies is easy, with all icons displayed right on the screen.

Free Reading Station

The BWII can be used in an active network environment, enabling you to read your EEG results from any computer you choose. You can read from the computer originally used for the test, your office, or even the comfort of your own home, free of charge.

Remote Access

Studies can be accessed by an authorized physician from any computer or Apple iPad* to review the EEG data, even during the live recording**.

BWAnalysis EEG Highlights

- Brain Mapping Included on the Analysis Software
- Works with most EMR platforms and HL7 interface
- Custom reports in Microsoft Word for each physician and practice
- User-designed workspaces for collection, analysis and MD Review
- Montages, filters, sensitivity and page speed can be adjusted during recording and reading
- Plug-n-play interface for spike detection software

*Apple iPad is a trademark of Apple Computer **A 3rd party app will be used for the live review interface
