

ARIA™ Oncology Information System

ONCOLOG CANCER REGISTRY

Evaluate and assess the outcomes of your cancer care program with OncoLog Registry software, a suite of tools that help you collect, analyze and report treatment patterns, complications, follow-up and outcomes.

Through Varian's partnership with Onco, Inc., developers of the first networked cancer registry system, ARIA provides OncoLog Registry software to enable clinics to easily aggregate and report cancer care and survival data. OncoLog is a proven tool for cancer program analysis and management and fully adaptable to the size of your practice. Implementing ARIA with OncoLog provides workflow efficiency throughout the treatment, analyses and reporting processes.

Key features

- > A full suite of easy-to-use tools for gathering, tracking and reporting patient disease
- > Highly automated data entry and management functionality to ensure information integrity
- > Fast and seamless access to cancer information to facilitate the decision-making process
- > Standard and customizable reports to help identify trends and treatment efficacy in target groups
- > Compatible with national and international cancer registry standards and guidelines
- > Compliant with regulatory requirement such as HIPAA
- > Open client architecture and HL7 support

Evaluating and assessing the outcomes of your cancer care program

Improve cancer treatment delivery

Quality information is essential to the assessment and improvement of cancer treatment delivery. OncoLog provides a comprehensive suite of tools designed to collect, track and report patient disease throughout and beyond the treatment process. With this information at their fingertips, cancer specialists can identify trends and track the effectiveness of different treatment approaches and improve the decision-making process with faster access to cancer information.

These tools include:

- Automated case-finding for potential suspense cases
- Automated patient demographic download
- Death search and automatic, dated status change
- Gather report module that allows you to build a study population that meets your criteria
- Different survival models support
- Flexible and scalable database with unlimited customizable data fields
- User-defined lists creation that easily export to Microsoft Excel
- Graph, export, and print capabilities

Streamline reporting processes

OncoLog is designed to eliminate the volumes of paper produced and handled each month, so you see a significant reduction in the time and resources needed for routine tasks. Furthermore, the high level of automation provided by OncoLog results in an overall improvement in data quality and a reduction in the input error rate, decreasing the number of missed cases each year.

Advanced administrative features in OncoLog include:

- Quicklog for faster data entry
- Automated data import
- Remote data access
- Standard and customizable reports solutions
- Attractive presentations of frequency tables, cross tabulations, and survival graphs
- Automatic integration with Microsoft Word, Excel, Access or Crystal reporting tools
- Full compatibility with national and state cancer registry standards

Elements of the ARIA solution

ARIA is a comprehensive oncology information management system that combines the power of the electronic medical record with the promise of advanced cancer treatment techniques.

Activity, cost, and charge capture
Chart quality assurance
Chemotherapy management
Clinical data storage
Clinical trials management
Data protection and recovery
Drug safety support
Multi-department management
Multi-modality image review
Oncology-specific electronic medical record
Patient encounter documentation
Pharmacy preparation and dispensing
Radiation therapy management
Report generation and outcomes assessment
Resource and activity scheduling
Rules-based decision support
Treatment plan/prescription workspace
